

AUB MEDICAL CENTRE

PROJECT NAME	AUB MEDICAL CENTRE
LOCATION	BEIRUT, LEBANON
CLIENT	AMERICAN UNIVERSITY OF BEIRUT
CONSTRUCTION PERIOD	24 MONTHS

MAC Construction was involved with the building of a new Medical Centre as part of a major expansion of the American University of Beirut Hospital. The centre became one of the largest and most advanced medical facilities in the Middle East and made a substantial contribution to the upgrading of medical services and research throughout the area. The entire complex was clad with a natural sandstone which is unique to Lebanon, and with white stone reveals to all doors and windows. The external area was custom landscaped to blend with the existing AUB Campus.

The turnkey construction of the centre included:

- Basic Sciences Building: a large eight-storey building with classrooms, offices and some 130 laboratories for teaching and research in medical science.
- Medical Library Building: one of the largest in the Middle East, featuring a unique, automated and mechanized system for storage and retrieval.
- Four-storey underground car park excavated in solid rock and capable of accommodating 460 cars.
- Conference Building: featuring a 900-seat lecture hall with a parabolic roof, advanced acoustics, motorized screens and full ancillary equipment.
- Refurbishment of Nurses Residence Building: 160 rooms and full modern facilities throughout.
